For more than 5 years ProNet has imported and sold Sprintech and CityTech mirrors – “the perfect cycling mirror”!

It is hard to believe that it has been so many years ago I discovered the “perfect product” while visiting the Milan International Cycle Show! Since that time ProNet has grown from a two person company to five people and reaches markets in North America, Asia, South Pacific and Latin America. A lot of our successful growth has been due to representing “perfect products” like Sprintech and CityTech mirrors.

ProNet is currently selling to five distributors in North America, one distributor in each of Japan, Korea, Singapore and Thailand. All distributors consistently comment about the reliability of Sprintech and CityTech mirror support, sales and lack of issues.

Sprintech and CityTech mirrors are perfect for all types of cycling – racing, touring, clubs rides, leisure cycling and commuting. They are easy to install even to most novice of mechanics and cyclists.

Racers and club riders like them because they actually see who or what is behind them. They are light, stay in position and are resistant to impacts and scratches during crashes or transport.

Touring cyclists like them for all the same reasons plus they are easily installed on both sides for viewing of drive-ways, sidewalks and houses were a dog waits to raise havoc with a passing cyclist.

Commuters especially like them because of the durability and ability to see a wide range of area to the rear.

Easy to install, scratch resistant, stays in place once set, attractive packaging and really nice people to work with – the perfect product!
